

Neem-coated Urea makes your hard work pay-off. With better water, better land and better yield.

Urea is the most consumed fertiliser in our country.
Government of India has now made it mandatory for domestic manufacturers
to produce 100% neem-coated urea.

What is Neem-coated Urea?

In neem-coated urea, every granule of urea has a coating of neem oil which slows down the rate of dissolution of urea in soil and thus increases the availability of nitrogen for crops.

BENEFITS OF USE OF NEEM-COATED UREA

- Increase in crop yield • Improvement in soil fertility • Optimum utilisation of limited water resources
- Decrease the cost of cultivation • Better nutrition for family • Slow release of nitrate into the soil improves ground water quality • Lesser quantity of urea required, saves precious foreign exchange
